Summary

Full Stack Software Engineer with experience in C#/.NET, Node.js, TypeScript and React, building and maintaining production systems. Work on a multi-tenant e-commerce platform with dozens of stores and ~1M products, a multi-company financial module in .NET, APIs, messaging, PostgreSQL, Redis, Docker, AWS and CI/CD, from implementation to deployment and production troubleshooting.

Professional experience

11/2025 - Present

Software Engineer
Ecenture

- Development and maintenance of a multi-tenant e-commerce platform, with dozens of stores and ~1M products, handling hundreds of thousands of HTTP requests and tens of thousands of webhooks and jobs per day.
- Development of a multi-company financial module in C#/.NET, ASP.NET Core and Entity Framework Core with PostgreSQL: accounts payable and receivable, payments, transfers and cost centers, with Row-Level Security isolation.
- Migration of the legacy financial system with legacy-vs-new reconciliation and sync up to cutover, with no data loss, and sales integrated into the financial module in the same transaction, with idempotent automatic payments.
- Replaced manual SSH deploys with automated deploys using Jenkins, Docker Hub and per-service builds: ~3.5 min from merge to production. Cut page-rendering load by 49.5% by measuring bot traffic and blocking the heaviest crawlers.
- Recovered and synced tens of thousands of products from the legacy platform, migrating settings and images for dozens of stores.
- Investigated intermittent Bun runtime hangs in production and migrated the affected services to Node.js.
- Integrations with Mercado Livre, Magalu and Tray, plus workers and async processing with Go, Redis and RabbitMQ.

08/2025 - 08/2026

Software Engineer
IDW

- Software house: built systems from scratch for clients and supported existing projects.
- Financial reconciliation system built from scratch for a financial services client, with NestJS, PostgreSQL, Redis and BullMQ, automating bank statement import, normalization, matching and discrepancy review.
- Help desk platform with NestJS, PostgreSQL and Socket.io: tickets, real-time chat, attachments, permissions, SLA and admin settings.
- Integrated financial modules (QR code payments, transfers and virtual cards) into existing applications and led the React frontend of a SaaS platform.

02/2025 - 08/2025

Frontend Developer
SuperOne

- Developed and maintained the frontend of online stores, focusing on the shopping experience.
- Built the company website.
- Learned Svelte on the job and shipped to production within weeks.

10/2024 - 02/2025

Full Stack Developer
Gentileza

- Built an onboarding, compliance and certification platform for companies and products, from day one to production.
- Diagnosis, technical validation and compliance-plan flows in an API with TypeScript, PostgreSQL and Drizzle ORM.

- Cognito/OIDC authentication, PDF certificate and seal generation, and security validations integrated with AWS Lambda, S3, SES and SQS.

Projects

2026

Broadcast

React, TypeScript, Firebase, Cloud Functions

- Multi-tenant messaging SaaS with instant or scheduled sending via Cloud Functions and real-time per-recipient status. github.com/luizalvesdev/broadcast

2026

Finanças

Expo, React Native, PostgreSQL, Drizzle, Claude API

- Personal finance app for iOS, Android and web with natural-language expense entry, credit card statements and households isolated as tenants. github.com/luizalvesdev/financas

2026

Lets Prospect

Node.js, Fastify, React, SQLite, Amazon Bedrock

- B2B prospecting platform with citation-verified AI qualification and human approval on every send. github.com/luizalvesdev/lets-prospect

Education

Certificate, 100h

Skills

- Languages: C#, TypeScript, JavaScript, Go
- Backend: .NET, ASP.NET Core, Entity Framework Core, Node.js, NestJS, REST APIs, WebSockets
- Frontend: React, Next.js, Expo / React Native, Svelte
- Testing: xUnit, Testcontainers, Vitest
- Data: PostgreSQL, MySQL, Redis, Typesense
- Messaging and async processing: RabbitMQ, BullMQ
- Cloud and DevOps: AWS, Docker, Cloudflare, Linux, Jenkins, GitHub Actions, CI/CD
